

.NET Core Web API 使用 Swagger

一、 NuGet 安裝 Swashbuckle

二、 在 Program.cs 加入 app.UseSwaggerUI、SerializerOptions.NumberHandling :

```
builder.Services.ConfigureHttpJsonOptions(options =>
{
    options.SerializerOptions.NumberHandling =
        JsonNumberHandling.Strict;
});
```

```
// Configure the HTTP request pipeline.
if (app.Environment.IsDevelopment())
{
    app.MapOpenApi();

    app.UseSwaggerUI(options =>
    {
        options.SwaggerEndpoint("/openapi/v1.json", "v1");
    });
}
```

三、 launchSetting.json 加入"launchUrl":"swagger"、"launchBrowser"改為 true :

```
"https": {  
  "commandName": "Project",  
  "dotnetRunMessages": true,  
  "launchBrowser": true,  
  "launchUrl": "swagger",  
  "applicationUrl": "https://localhost:7211;http://localhost:5133",  
  "environmentVariables": {  
    "ASPNETCORE_ENVIRONMENT": "Development"  
  }  
}
```
